

MOBILE COMMUNICATION 3100

FEATURES & BENEFITS

- Single Number Reach: Users no longer need to leave a trail of phone numbers and can be reached anywhere, anytime.
- Single Identity: Calls dialed from the mobile device carry office ID
- Single Voice Mail and MWI: Users only need to manage a single voicemail for business calls
- Call from Corporate Directory: Users can search and call from contacts and corporate directory
- Least cost routing: Mobile LD and Int'l calls are routed using the enterprise dial plan to minimize costs
- Short sequence dialing: Familiar PBX extensions can be dialed directly from the mobile devices
- Enterprise Telephony Services: Enterprise conferencing, attendant and mid-call features are extended to mobile devices for a consistent user experience, and lower service fees
- Any network: Users can choose their wireless service - GSM/GPRS/EDGE, CDMA/1xRTT/EVDO, Wi-Fi, etc.
- Any device: Support for popular business-class and personal smartphones prevents platform lock-in
- Device Handoff: Users can seamlessly move active calls between different devices, providing them with a flexibility to choose the most appropriate device.
- Instant Conference: Single-step immediate group conferencing improves collaboration
- Advanced Call Control: Users can originate/answer calls from devices other than the mobile device for convenience or to mitigate costly long distance cellular charges.
- Presence and Instant Messaging: Users can view other contact's online status and send instant messages in real-time
- Over-the-air software download for easy user installation and configuration
